

HIGH PERFORMANCE LEATHER  
& TEXTILE FINISHING

# LEATHER & TEXTILES

## ORMOCER® FOR FASHION, CREATIVE & TECHNICAL PRODUCTS:

The inorganic-organic ORMOCER® coatings specifically developed for textile and leather. They are the basis for the innovative finishing systems, which for the first time allow a combination of previously incompatible functions in one finish, e.g. hydrophobic, abrasion-resistant, flame-retardant, antimicrobial, antistatic.

## YOUR ADVANTAGES

Our InnoSolTEX® textile finish is water-based, a one-step process and can be applied using conventional methods.

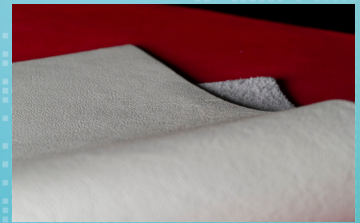

## OUR FINISH

- has hydrophobicity with a correspondingly high water vapor permeability
- provides resistance to sweat and other impacts
- preserves natural haptics and appearance

## FOR THE INDUSTRY

The textile industry thus has a finishing system at hand that, depending on the substrate, meets a wide range of requirements with multiple functions in a single coating solution and one coating step.

The leather industry and leather finishers can offer high quality products with improved functional properties and novel combinations of characteristics.
